

# Sona-Speech II

*Even without a large budget, you can still afford the best speech therapy software available.*

**S**ona-Speech™ II is a powerful, low-cost therapy product from KayPENTAX. With the same sophisticated software as KayPENTAX's acclaimed Visi-Pitch™ IV, Sona-Speech II offers tremendous versatility with seven separate modules (and two optional programs) for assessment and treatment of a broad spectrum of communication disorders at a tremendous bargain.

Because Sona-Speech II relies on standard sound cards for data acquisition and playback, rather than the robust hardware of the Visi-Pitch IV, it is ideally suited to the budget-minded clinician.

The broad applicability of Sona-Speech II extends across a variety of disorders including voice, articulation, fluency, and motor speech (dysarthria). Games are included to help motivate and reward children in therapy. Sona-Speech II can also be used for English as a Second Language (ESL) and accent reduction.

For more information about Sona-Speech II, contact KayPENTAX or a local representative.

Sona-Speech and Visi-Pitch are trademarks of KayPENTAX.
